***Reason for Allowance***

The following is an examiner's statement of reasons for allowance: In view of the amendment filed on 01-11-05, the prior art reference of records (US Pat. 6,194,952) fails to teach or fairly suggest a switching circuit comprising another internal circuit which executes another predetermined function, and a switch element which is coupled between the input terminal and the another internal circuit, and which has a control gate receiving the control signal, a first electrode coupled to the input terminal, and a second electrode coupled to the another internal circuit as called for in claim 1; a switch circuit comprising a first internal circuit having a first noise resistance capability and a second internal circuit having a second noise resistance capability that is weaker than the first noise resistance capability as called for in claims 8 and 14. Therefore, claims 1-5 and 8-18 are presently allowed.

***Conclusion***
